

## BR 10a · M-PTFE-lined double-eccentric Control and Shut-off Butterfly Valve

DIN and ANSI Version

### Applications

Tight-closing, double-eccentric butterfly control valve with M-PTFE lining for process engineering and plants with industrial requirements, especially suitable for corrosive process media:

- Nominal size NPS4 to 32 and DN 100 to 800
- Nominal pressure cl150 and PN 10
- Temperatures -40 to +392 °F (-40 to +200 °C)

The control equipment consists of a M-PTFE lined Butterfly valve and a pneumatic quarter-turn actuator or a hand-lever. The valves, which are of modular construction have the following features:

- Valve body made of
  - Spheroidal graphite iron A395 with the ANSI-version, or
  - EN-JS 1049 ( GGG 40.3 ) with the DIN-version
- The valve body is lined with a
  - 8 to 12 mm thick isostatic M-PTFE lining
- Body style
  - Wafer-Type or
  - Lug-Type
- Valve disc and valve shaft made of:
  - Stainless cast steel 1.4313, PTFE encapsulated
- Further characteristics:
  - All parts in contact with media, are PTFE-lined
  - Excellent control characteristic even with small opening angles
  - Low breakaway torque and low amount of wear due to the double eccentric bearing design of the shaft
  - Suitable for vacuum operation
  - Wafer type butterfly valve and Lug type butterfly valve can be mounted between flanges acc. to ANSI cl150 or DIN PN 10
  - The disc can be exchanged without removing the shaft
  - "TA-Luft" (German clean air act) and VDI 2440
  - Attachment options acc. to DIN ISO 5211
  - Face-to-face dimensions acc. to ANSI version DIN EN 558 Series 16 (ISO 5752, series 16)
  - Face-to-face dimensions acc. to DIN version DIN EN 558 Series 16 (K3 acc. to DIN 3202)

## Versions

M-PTFE lined butterfly control valve in the following versions:

- Butterfly valve with manual gear actuator
- Shut-off valve with BR 31a pneumatic rotary actuator
- Throttling valve preferably with Series 30a pneumatic diaphragm actuator

## Special version

- Adjustable stuffing box
- Electric rotary actuator
- Linings with special PTFE compounds, e.g. electro conductive
- Special stem seals for high vacuum,
- Disc components made of special materials, e.g. titanium, hastelloy
- Special stem seals for high vacuum
- End stop

## Additional accessories and attachments

The following accessories for the control valve are obtainable either single or in combination:

- Positioner
- Limit switch
- Solenoid valve
- Air supply station
- Pressure gauge mounting blocks
- Pneumatic volume booster

Further attachment parts are possible on request, according to specifications.

## Function and operation

Fig. 4: Direction of flow

The process medium can flow through the butterfly valve in both directions.

The butterfly disc (3) determines the flow through the free area between disc and seat.

The shaft (2) is sealed at both ends by a V-ring packing (4 and 6). With the spring washers (8 and 16) located at the top of packing chamber, the packing is maintenance free and pre-loaded.

Butterfly valves are sealed between the butterfly disc (3) and the seat.

The direction of flow, and the differential pressure determine the breakaway torque to open the butterfly valve. The double eccentric bearing of the disc shaft, causes the disc to remain in contact with the seat only through a very small angle when opening and closing (Fig. 4). This reduces wear and increases the service life of the valve. In addition, the breakaway torque is reduced.

When the process medium flows through the valve in **direction A** (Fig. 4), the butterfly disc is slightly lifted out of the seat. This reduces the pre-loading and the breakaway torque. When the process medium flows through the valve in **direction B**, the pre-load forced rises, with a subsequent increase in the breakaway torque.

## Failure position

Depending on the pneumatic actuator, the butterfly valve has two safety positions, which become effective when pressure is relieved, or when the air supply fails:

- **Butterfly valve with actuator "Spring closes"**

When the air supply fails, the valve closes. The valve opens when the air control pressure increases acting against the force of the springs.

- **Butterfly valve with actuator "Spring opens"**

When the air supply fails, the valve opens. The valve closes when the air control pressure increases against the force of the springs.

### i Note

Before using the butterfly valve in hazardous areas, check whether this is possible acc. to ATEX 2014/34/EU. See mounting and operating Instructions ► EB10a.

## Functional diagram with opening angles

Fig. 5: Functional diagram with opening angles

**Table 2:** General technical data

Nominal size	DN 100 to DN 800	NPS4 to NPS32
Nominal pressure	PN 10	cl150
Body style	Lug-Type and Wafer-Type	
Can be mounted between	Flanges PN 10	Flanges ANSI cl150
Temperature range	See pressure-temperature diagram	
Leakage for	Flow direction A On request, depending on pressure and temperature	
	Flow direction B Leakage rate A acc. to DIN EN 12266-1, P1 (Class VI acc. to ANSI / FCI 70-2-1976)	
Rangeability	50 : 1	
Face to face dimensions	DIN EN 558, series 16 ( DIN 3202, K3 )	DIN EN 558, series 16 (ISO 5752, series 16)
Perm. operating pressure	See pressure-temperature diagram	
External leakage tightness	< 10-6 mbar l/sec	

**Table 3:** Material

Version	DIN	ANSI
Body	EN-JS 1049 ( GGG 40.3 )	A 395
Lining	M-PTFE	ASTM D 4894 Type III-2
Butterfly disc	1.4313 with PTFE coating	1.4313 with ASTM D 4894 Type IV-2
Shaft	1.4313 with M- PTFE coating	1.4313 with ASTM D 4894 Type III-2
Packing	PTFE V-ring packing loaded by Disc springs (1.8159)	
Bearing bushing	PTFE with carbon	
Coating	Two-component polyurethane, grey beige, RAL 1019	

### Pressure-Temperature diagram

The area of application is determined by the pressure-temperature diagram. Process data and the process medium can affect the values in the diagram.

**Fig. 6:** Pressure-temperature diagram

**Table 4:** Terms for noise level calculation

$\zeta$ -values for noise level calculation acc. to VDMA 24422 and therms for control valve sizing acc. to DIN EN 60534 opening angle.

$\varphi$	10°	20°	30°	40°	50°	60°	70°	80°	90°
FL	0.95	0.95	0.92	0.82	0.74	0.67	0.61	0.57	0.54
xT	0.75	0.75	0.73	0.57	0.47	0.38	0.31	0.28	0.25
Z	0.35	0.30	0.25	0.20	0.17	0.15	0.13	0.12	0.11

### Correction terms

With liquids  $\Delta LF = 0$ ,

With gases and vapors  $\Delta LG = 0$

**Table 5:** Torque and breakaway torques

Perm. Differential pressure $\Delta p$			0	5	10	16
Nominal size		Torque MDmax. in Nm	Breakaway torque Mdl in Nm			
DN	NPS	MDmax. in Nm	40	55	70	88
100	4	225	40	55	70	88
150	6	490	120	205	290	392
200	8	988	190	340	490	
250	10	1930	350	820	1290	
300	12	3066	500	1033	1567	
350	14	4365	736	1541	2346	
400	16	4576	800	1675	2550	
500	20	8938	924	2100	3276	
600	24	15444	1300	2900	4500	
800	32	33930	1700	4100	6500	

The specified breakaway torques are average values which were measured with air at 20°C (68°F) with the corresponding differential pressures. Operating temperature, process medium and long operating periods may affect the permissible torques and breakaway torques considerably. The maximum permissible torques listed apply to the standard materials specified in table 3.

## Selecting and sizing the butterfly valve

1. Calculate the appropriate kv value
2. Select the nominal diameter and the kvs value (Cv value ) from table 6
3. Check the operation conditions in acc. to the pressure-temperature diagram
4. Select a suitable actuator

## Associated data sheets

- Mounting and operating instructions ► EB 10a
- Safety manual ► SH 10
- For pneumatic Multi-turn actuator ► TB 30a
- For pneumatic Quarter-turn actuator ► TB 31a
