

## T 3004 EN

### Series 42 Self-operated Regulators · Type 42-24 and Type 42-28 Differential Pressure Regulators With Type 2424/Type 2428 Actuator (closing) and balanced Type 2422 Valve ANSI version

#### Application

Differential pressure regulators for district heating systems, extended heating systems and industrial applications

Differential pressure set points ( $\Delta p$ ) **from 0.75 to 145 psi/0.05 to 10 bar** · Valves **NPS ½ to 10** <sup>1)</sup>/DN 15 to 250 <sup>1)</sup> · Pressure rating **Class 125 to 300/PN 16 to 40** · Suitable for liquids and vapors <sup>2)</sup> from **40 to 660 °F/5 to 350 °C**, for air and non-flammable gases up to **175 °F/80 °C**

The valve **closes** when the differential pressure **rises**.

The regulators control the differential pressure according to the adjusted set point.

#### Special features

- **Type 42-24:** Set point adjustable in wide range
- **Type 42-28:** Fixed set point
- Low-noise, medium-controlled proportional regulator requiring little maintenance
- Suitable for circuit water, water/glycol mixtures, steam and air as well as other liquids, gases and vapors, provided these do not affect the characteristics of the operating diaphragm
- Valve body available in cast iron, cast steel and cast stainless steel
- Single-seated valve with a plug balanced by a stainless steel bellows or a diaphragm (NPS 2½ to 10/DN 65 to 250)
- Particularly suitable for district heating supply networks

#### Versions

**Differential pressure regulators** for installation in the flow pipe and return flow pipe (see Fig. 5) · Flanged connections

- **Type 42-24** (Fig. 1) · Type 2422 Valve · Balanced by a bellows NPS ½ to 10/DN 15 to 250 · Balanced by a diaphragm NPS 2½ to 10/DN 65 to 250 · Type 2424 Actuator with adjustable set point
- **Type 42-28** (Fig. 2) · Type 2422 Valve · Balanced by a bellows NPS ½ to 4/DN 15 to 100 · Balanced by a diaphragm NPS 2½ to 4/DN 65 to 100 · Type 2428 Actuator with fixed set point, adjusted to  $\Delta p = 3, 4, 6$  or  $7 \text{ psi}/0.2, 0.3, 0.4$  or  $0.5 \text{ bar}$

#### Accessories

Required accessories, such as compression-type fittings, needle valves, compensation chambers and control lines, are listed in Data Sheet ▶ T 3095.

**Fig. 1:** Type 42-24 Differential Pressure Regulator

**Fig. 2:** Type 42-28 Differential Pressure Regulator

#### Special versions

- DIN and JIS versions on request
- Versions free of non-ferrous metal on request
- Actuator with two diaphragms
- Version for temperatures above 430 °F/220 °C
- Version for deionized water
- Version for mineral oils which do not affect the characteristics of the FKM diaphragm; other oils on request
- Type 2422 Valve · DN 15 to 50 without pressure balancing
- Special set point 8 to 16 bar for valves  $\leq$ DN 100 on request
- Version for small flow rates · Valve with micro trim with  $C_v 0.0012$  to  $0.05/K_{vs} 0.001$  to  $0.04$  or  $C_v 0.12, 0.5$  and  $1.2/K_{vs} 0.1, 0.4$  and  $1.0$  without pressure balancing

<sup>1)</sup> Valves larger than NPS 10/DN 250 on request

<sup>2)</sup> Version balanced by a bellows only

### Principle of operation (Fig. 3)

The medium flows through the valve in the direction indicated by the arrow. The position of the valve plug (3) determines the differential pressure over the cross-sectional area released between the plug (3) and seat (2).

The Type 2422 Valve is balanced. The forces acting on the valve plug created by the upstream and downstream pressures are balanced by a balancing bellows (5) or balancing diaphragm (5.1). Regulators balanced by a bellows or a diaphragm only differ in the pressure balancing principle applied. Valves balanced by a diaphragm have a balancing diaphragm (5.1) instead of the balancing bellows. The downstream pressure  $p_2$  acts on the bottom of the diaphragm and the upstream pressure  $p_1$  on the top of the diaphragm. As a result, the forces created by the upstream and downstream pressures acting on the plug are balanced out.

The differential pressure to be controlled is transferred to the operating diaphragm (13) where it is transformed into a posi-

tioning force. This force is used to move the plug (3) according to the force of the set point springs (16). The valve begins to close as soon as the differential pressure exceeds the set point.

The set point of Type 42-24 can be adjusted at the set point adjuster (A/F 27, 17). In Type 42-28, the set point springs in the actuator determines the set point.

A seal in the actuator separates the pressure in the valve from the pressure in the actuator.

Control lines (20) mounted on site transfer the high pressure (+) and low pressure (-) in both regulator versions.

Type 2424 and Type 2428 Actuators are equipped with an overload protection (21). It prevents a rise in differential pressure during extreme operating conditions (e.g. vacuum at the heat exchanger) by opening an internal excess pressure limiter. As a result, plants and the regulator itself are protected against excessively high differential pressures.

Fig. 3: Functional diagram

### Type 42-24 Differential Pressure Regulator with two diaphragms

SAMSON offers a special version of Type 42-24 with an actuator with two diaphragms (see Fig. 4). The actuator with two diaphragms provides increased functional reliability.

An actuator with two diaphragms is always required when an FKM diaphragm is to be used. It is especially suitable for applications with thin oils (e.g. heat transfer oil).

The two diaphragms separate both diaphragm chambers connected to the high-pressure and low-pressure connections. They generate a positioning force from the differential pressure. A mechanical diaphragm rupture indicator (22) is located between the two diaphragms, which responds at approx. 1.5 bar. In the event of a diaphragm rupture, the pressure in the space between the two operating diaphragm starts to increase. This causes the pin in the diaphragm rupture indicator to be pushed outwards and a red ring appears, indicating the diaphragm rupture. The intact operating diaphragm takes on the control task of the ruptured diaphragm.

A pressure switch can be optionally mounted to the actuator to trigger an alarm. We recommend replacing both diaphragms after a diaphragm rupture is indicated.

Fig. 4: Actuator with two diaphragms for Type 42-24 (special version)

### Installing the valve and mounting the actuator

Valve, actuator and control lines (accessories) are delivered unattached.

A coupling nut is used to attach the actuator to the valve. Preferably mount the actuator after the valve is installed.

The following points must be observed:

- Install the valve in horizontal pipelines.
- The direction of flow must match the direction indicated by the arrow on the body.
- Install a strainer (e.g. SAMSON Type 2 NI) upstream of the valve.

### Permissible mounting positions

- Actuator suspended: standard installation, balanced by a bellows or diaphragm, all versions, above 175 °F/80 °F. Steam control only for version with balanced by a bellows.
- Actuator sideways: versions balanced by a bellows with fixed plug guide or all versions balanced by a diaphragm
- Actuator upright (actuator on top of the valve): all versions balanced by a diaphragm, versions balanced by a bellows NPS ½ to 3/DN 15 to 80 and at the same time max. 175 °F/80 °C.

Refer to ► EB 3003 for more details.

<sup>2)</sup> Optionally with actuator 50 in<sup>2</sup>/320 cm<sup>2</sup>

<sup>3)</sup> The weight applies to the version made of cast iron A126B. Add +10 % for all other materials.

<sup>4)</sup> NPS 6 to 10/DN 150 to 250: 65 to 145 psi/4.5 to 10 bar on request

<sup>5)</sup> Actuators with metal cover H +5.32"/+135 mm

<sup>6)</sup> The height H increases to 7.87"/200 mm at the maximum, depending on the extension piece used.

<sup>7)</sup> Special version A = 25 in<sup>2</sup>/160 cm<sup>2</sup> without internal excess pressure limiter; with internal excess pressure limiter: H -2 in/50 mm

Dimensional drawing of Type 42-24 and Type 42-28 balanced by a diaphragm · Dimensions and weights (see Table 5)

Type 2422 Valve balanced by a diaphragm with Type 2424 Actuator

Dimensional drawing of actuator with two diaphragms

Type 42-24 with two diaphragms: Add approx. 2"/55 mm to the overall height H.

Table 5: Dimensions and weights for Type 42-24 and Type 42-28 · Balanced by a diaphragm

Nominal size	NPS		2½	3	4	6	8	10
	DN		65	80	100	150	200	250
